

Alcohol and Irritable Bowel Syndrome

Irritable bowel syndrome (IBS) is a painful disorder of the large intestinal tract (colon). In this condition, the intestine loses its capability to work properly. In IBS, food either moves too gradually or too fast through the intestinal tract. When the contents inside the intestinal tract relocation gradually, it frequently causes irregularity. When the consumed food relocations fast, the intestinal tract is unable to soak up any fluids. As an outcome, excessive fluid is discovered in the stool (diarrhea).
