Cravings.

Skipping Lunch or Breakfast in the Name of Diet Typically Results in Stomach Growling

To put it simply, stomach banging at periodic durations suggest that the individual is starving. In numerous instances, tummy grumbling is accompanied by intolerable hunger pains that go away only after consuming enough quantity of food. When the stomach is empty, it secretes certain hormones, prompting regional nerves to relay signal to the brain. The brain responds by sending out another signal to the stomach and the intestine. This triggers repeated contraction of muscles, lining the digestion system. So, the growling sounds that you hear are nothing but repeating episodes of contraction that happen in the gastrointestinal system.
