

## Bloating After Eating

**B**loating is often linked to overeating and heavy meals. No doubt, the quantity and option of food is a significant element that can contribute to bloating, however did you understand that it can also be brought on by particular medical conditions? Even some lifestyle elements are connected to bloating and stomach pain after consuming. Periodic bloating might not constantly show an underlying illness. However, if it occurs on a regular basis or if the signs are extreme, you must seek medical interest.

### Reasons for Bloating - Medical Conditions

**Food intolerance:** Bloating is one of the classic symptoms of food intolerance, which may likewise trigger nausea, abdominal discomfort, **diarrhea** or **constipation**. This condition needs to not be confused with food allergy. Food intolerance symptoms typically appear within a few hours or days after intake. This condition is brought on by the body's failure to produce the specific enzyme required for digesting that food. It is primarily connected with foods, like wheat (gluten intolerance), dairy items, soy items, shellfish, eggs, peanuts and chocolate.

### Peptic Ulcers

Recurring episodes of stomach discomfort or discomfort might be because of the inflammation of the stomach lining. This lining performs the function of safeguarding the stomach from the acids. Long term use of certain anti-inflammatory medications, extreme consumption of alcohol and cigarette smoking might likewise lead to erosion in stomach lining. Due to swelling and erosion of the thick mucous layer or the stomach lining, hydrochloric acid and pepsin present in the stomach can trigger sores or peptic ulcers. Ulcers might likewise be caused due to an infection in the stomach lining by a bacterium called H. pylori.

### Why Do You Feel Bloating

Bloating is often related to tightness in the stomach, flatulence and belching. Primarily, this takes place due to the existence of big amounts of gas in the stomach. Normally, a percentage of gas is produced in the intestinal tracts, as a byproduct of food digestion. In some cases, a large quantity of gas is produced in the digestive tract, due to different causes like, problems of the digestive procedure. This increases the pressure inside the abdomen, which might expand to accommodate the contents.

### This Describes the Inflated Belly, Due to Bloating

The increase in pressure triggers the tight feeling and the occasional cramping and pain. Stomach pain caused by bloating may radiate to other place, like the chest and back. The body tries to expel the gas through burping and by passing wind. The signs may diminish in a couple of hours or take a few days, according to the severity of the condition and the underlying cause. Some individuals tend to swallow excess air into the stomach, resulting in bloating. Even physical blockages (like tumors) in the intestinal tracts might trigger bloating. The causes of bloating can be broadly classified into way of life aspects and medical conditions.

### Gynecological Problems

Some women can experience abdominal discomfort throughout menstruation. Pregnant ladies might experience a jabbing discomfort in occasion of an ectopic pregnancy. This is a problem of pregnancy in which the fertilized egg gets implanted outside the uterus. It might be implanted in the abdominal area, ovary or the cervix. This could cause serious discomfort in the lower right or lower left abdomen. Inflammation in the fallopian tubes or development of unpleasant ovarian cysts could likewise trigger a piercing discomfort.

### Problems in Pregnancy and Breastfeeding

Consuming aloe vera juice throughout pregnancy, or while breast feeding is badly restricted due to its irritant and purgative homes. Aloe vera must be restricted during lactation, as the existence of anthraquinones in the breast milk might result in diarrhea. In pregnant ladies, aloe vera juice can cause uterine contractions, and even lead to a spontaneous miscarriage. Aloe vera juice is likewise hazardous for children listed below twelve years of age, as it can cause diarrhea and abdominal cramps.

*Although there are no magic foods to make your stomach feel much better once your symptoms appear, you might be able to decrease the frequency of your signs if you follow these pointers:*

### Consume a Healthy Diet of Low-Fat Foods.

Consume six to eight glasses of water daily.

### Eat More Regular, Smaller Meals.

Slowly include fiber to your diet plan (either by taking supplements or consuming high-fiber foods). Soluble fiber, which is in foods like spinach, apples, and figs, can help with both constipation and diarrhea. Foods abundant in insoluble fibers, including entire grain breads and cereals, can help bulk up your stool if you have diarrhea. If you experience gas, you might have included excessive fiber too quickly.
