Spastic Colon Diet

S **pastic colon** or an **irritable bowel syndrome** is a bowel disorder that results in diarrhea, constipation, bloating, lower abdominal pain, and general discomfort. This is accompanied by painful spasms while defecating, and an increasing urge to defecate. From reducing stress to having certain types of medication, there are many ways of relieving irritable bowel syndrome. However, it is the alteration in diet, which is believed to be the most reputable and healthy way of controlling this disorder.

Naturally, IBS Patients are Always Keeping an Eye Out for Foods that Trigger an Attack

The problem is that there is often no consistency since in some cases a food they believed was "safe" to consume can unexpectedly cause an attack. The problem here is that it's not so much the food that's eaten but what other foods it's combined with. Some foods just can not break down properly when combined with others and this can create uneasy bloating and embarrassing gas. Your entire gastrointestinal system can be in a state of stress, making it difficult for waste material to move through the intestines like it's supposed to, which then leads to **diarrhea** or **constipation**.

Candida

Candida is a type of yeast infection that develops in the digestive tract. Most frequently it leads to constipation that is brought on by fungal overgrowth or causes inflammation both these conditions lead to the production of yellow mucous in the stool.
